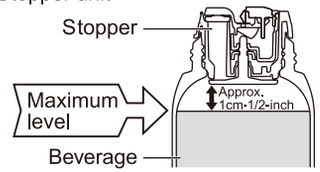
Do not place the product near stoves, open flames, or other sources of extreme heat.

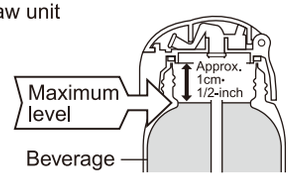
Do not heat the product in a microwave oven.

Do not fill the product above the maximum level shown below.

Stopper unit



Straw unit



Close the stopper unit or straw unit firmly and check that it is locked.
Otherwise, the contents may leak, causing burns and contamination.

Do not store milk, dairy products, or certain fruit juices in the product.

Noncompliance with these instructions may result in scald or injury.

Do not use the product if its ability to retain heat declines. Hot beverages can make the product very hot, potentially causing burns.

For inner stopper unit

Use a cup to drink when the product contains a hot beverage.

Do not press the open button when the product is tilted or near the face.

Do not tilt the product abruptly when pouring the beverage into the cup.

For straw unit

Do not add hot water.
Cold drinks only.

Consume beverage within the day to prevent from spoiling. If the beverage is left for an extended period, spoilage can lead to the creation of gas, raising the pressure inside the product. This can cause the contents to burst out or damage the straw unit, possibly resulting in injury.

Do not use the product for any purpose other than keeping beverages warm or cold for drinking.

Do not knock over, drop or expose the product to excessive shocks.

Do not disassemble or attempt to repair the product by yourself.

Be sure to clean the product immediately after use, especially after consuming sports drinks.

Keep the product in an upright position at all times.

Do not swing the product while holding the strap.

Do not place the product in the carrying case if its exterior is wet.

Make sure the carrying case is dry.

For straw unit

Ice changes the inner pressure so the gasket may dislocate. If this happens, set it back into it's proper position.

How to Use

The product rattles when shaken.
This is caused by a metal sheet moving inside the product that is used for boosting heat retention.
